**Background:**

Purchase a Portable Rubble Hog and a new Pre-Concrete Crushing Pulverizer, which will be used to recycle old concrete that is removed from existing sites. The old concrete will be transported to the equipment from current job sites or accepted from others, recycled into fill material, and then resold as recycled material that is in high demand in their market. The crusher will physically crush the concrete and the pulverizer will pre-crush the concrete as a necessary part of the recycling process.

**Purpose of the Loan:**

Concrete Services Corporation was founded by James and Nancy Hornyak with the intent of providing a full host of concrete services to the tri-state area. They have been in business since 1968 and have developed a full line of products to serve the construction industry. The company's primary product is the manufacture of Ready Mix Concrete. They also supply concrete finishing services, sand and stone, stamped concrete, concrete pumping and curbing to Northwest Pennsylvania, Eastern Ohio, and Northwestern New York Markets.
